

iPad Tip # 3

App Navigation

Closing Apps:

Clicking the Home button twice shows which apps are open. To close them, swipe them up off the screen. If an app is not acting correctly, close and re-open it.

Organizing Apps:

In order to move an app, tap and hold your finger on any app until they all begin to wiggle. **You can only rearrange them when they are wiggling.** When you are done moving them, press the Home Button to stop the wiggling.

Remember- apps must be wiggling to do the actions below!

Moving Apps

Drag an app to move it to a new location on the same screen. Drag it to the edge of the screen and hold it there to move it to a different screen.

Creating Folders

To create a folder, drag one app onto another and hold until a folder is created. Then release. Once a folder has been created you can add more apps to it and rename it.

Deleting Apps

Tap the Delete button that appears in the upper-left corner of the icon (you cannot delete apps that came with the iOS).

Docking Apps

Apps and folders in the dock at the bottom of the Home Screen are available across all of your screens. The Dock can hold up to six apps and/or folders. To add an app or folder to the dock, simply drag it to the dock while rearranging.
